PRODUCT PORTFOLIO

Here you will find the product categories ,
covering a wide variety of cutting, grinding, polishing , drilling applications.

Stone diamond tool is a high-performance tool specially used for processing stone. Its main feature is a tool with diamond as the cutting or grinding material. These tools include diamond saw blades, grinding wheel and drill bits, etc., which play an important role in the stone processing industry.

DIAMOND SAW BLADE

PRECISE CUTTING

Stone diamond saw blades are tools specially designed for cutting stone and are often used for processing hard stones such as marble and granite.

It has the characteristics of wear resistance and efficient cutting, and can be used in dry and wet environments.

The high hardness and sharpness of diamond particles enable them to cut accurately and keep edges flat. Because of its excellent performance, it is widely used in construction, stone processing and other fields.

GRANITE CUTTING BLADE

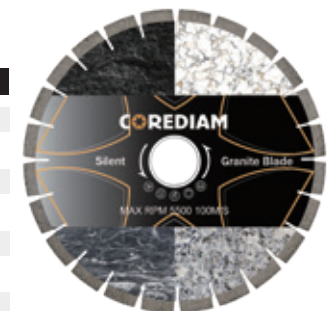

Granite Blade

Features: Consistent and durable cutting.

Applications: Wet cutting granite.

Regular / Sandwich steel Core

Item No.	Diameter	Segment Height	Segment Width	Arbor

DIAMOND CORE BITS

EFFICIENT AND ACCURATE

Stone core drill bits are tools used to drill holes into various hard stone surfaces and are commonly used in the fields of construction, decoration and stone processing. Its performance advantages lie in efficient drilling, precise positioning and wear resistance.

DIAMOND HOLE SAW BITS

Features: Sharp and smooth drilling
Applications: Wet drilling tiles, ceramic, marble ang granite.

DIAMOND WIRE

PRECISION CUTTING

Diamond wire is a cutting tool commonly used in the field of stone processing. It is used to cut hard stones such as marble and granite. Its advantage lies in efficient and precise cutting, suitable for stone slabs of various complex shapes and specifications.

GRANITE WIRE

Application: Flexible granite quarrying, block shaping, cutting

DIAMOND GRINDING WHEEL

EFFICIENT AND WEAR-RESISTANT

Diamond grinding wheel is a tool commonly used in the field of stone processing, used for grinding, dressing and polishing various stone surfaces. It uses diamond particles as grinding material, which has high hardness and wear resistance, and can effectively process hard stones such as marble and granite to produce a smooth and flat surface.

STONE GRINDING CUP WHEEL

Turbo Cup Wheel

Applications: For grinding granite,marble and other natural stone.
